of Contents

Table

Caution: This system is applicable an elevator with [moveable car platform]. Before use, please read the following content

carefully.

The Inductive magnet is specially-made rare-earth magnet for this product with strong magnetic force. Special care should be taken during installation. Under no condition should it be away from the high temperature above 100° C to avoid demagnetizing and the equipment damage and personal hurt from this is beyond our responsibility.

Notice: Our part is just responsible for the products quality in the guarantee period under any condition. Declaration: Our company reserves the right of changing products for technical improvement and the related technical parameters should be referred to the USER' S GUIDE along with the products.

Product Overview

1. Product Appearance, Interior Structure and Interface Directions:

2. Exterior Dimensions & Installing Scheme

- 3. System Adjustment and Directions
 - (1) System Positioning Operation:

Page6of20

When displaying [Lo], press [] and [] simultaneously, the system will start no-load operating parameters autotuning. When [PL] is displayed aglimer for 5s, it is the end of no-load autotuning.

- ③ System Adjustment under other conditions:
 - For the following reason, it is necessary to modify the operating parameters of this device.
 - ①For elevator car decoration change, the dead weight of the moveable car platform changes;
 - (2) The car platform appears mechanical deformation;
 - (3) The temperature difference between winter and summer has an unneglecting effect on the elastic coefficient of car platform damping rubber;
 - (4)The car platform appears damping rubber appears aging or deforming;
 - ⑤The elevator overruns at the top or at the bottom;
 - ⁽⁶⁾The weighing device becomes slack at the fixing end.

Operation Parameters Adjustment and the Implication

4. System Operation Parameters Adjustment (Annotation: * represents for a hexadecimal value of " $0 \sim 9$, $A \sim F$ ".)

(DSimultaneously press $[\pi]$ and $[\theta]$ on system control keypad to power on , this moment [PP] will be displayed aglimer, that means entering operation parameters modifying status.

 $@Release [\pi] and [\theta] buttons, system will display [P*] and [**] alternately. [P*] is an indication of system operation parameters; [**] is the interior data value of [P*].$

- (\mathbb{B}^*) when displaying $[P^*]$, press $[\theta]$, indication of system operation increases; press $[\pi]$, indication decreases.
- (4)When displaying [**], press [θ], data value increases; press [π], data value decreases.
- $\textcircled{\sc states}$ Release buttons, system displays operation indication and configuring data alternately.

OAt the moment when system displays $\llbracket P* \rrbracket$, Simultaneously press $\llbracket \pi \rrbracket$ and $\llbracket \theta \rrbracket$, system will save modified datum for future use. This moment, system displays $\llbracket Pn \rrbracket$ for 1 second. System operation parameters modification of this time is completed.

Example: Modify parameter P2 to 16;

- (1)Simultaneously press $[\pi]$ and $[\theta]$ on system control keypad to power on , this moment [PP] will be displayed aglimer, that means entering modifying status.
- (2)Release [π] and [θ] buttons, system will display [P0] and [**] aglimer
- (3)When displaying [P0] , press [θ] to increasing it to [P2] ;

(4)Release button [0], system alternately displays [P2] and [**];

(5)When displaying [**], press [π] or [θ] to regulate its value as [16];

G Release button, system alternately displays $\llbracket P2 \ensuremath{\,\mathbb{Z}}$ and $\llbracket 16 \ensuremath{\,\mathbb{Z}}$;

 \widehat{O} \widehat{O} At the moment when system displays [P2], Simultaneously press $[\pi]$ and $[\theta]$, system will save modified datum for future use. This moment, system displays [Pn] for 1 second. System operation parameters modification is completed.

5. Implication of parameter P:

1. Directions of Parameter PO [System Operation Mode]: :

Setting	Explanation	Default Setting	Normal Value				
00	Normal Operation						
01	Sensor installing positioning, system no-load and rated-load autotuning operation.		00 This value				
02	Specifying system no-load autotuning operation.	01	will be				
03	Specifying system Rated-load autotuning operation.	01	modified in				
04	Select "20% rated load" autotuning operation, being		the course of				
	convenient for users special adjustment.						
25~00	For elevator with known "no-load \rightarrow rated-load" compressing						
$\times 0.1$ mm	moveable car platform damping rubber pad, it may be set manually.						
1 1 1 1 1 1 1 1 1 1	The system may be put into use after system installation						
	positioning. (This adjustment is very convenient for elevator						
	manufacturers. For more detail, refer to Chapter 10.)						

2. Directions of Parameter P1

------------------------------	---	--	---	--

Notice: ①Select unindicated setting will lead to system abnormal operation.

②For the variety of the fleeting of elevator no-load point, special care should be taken in the use of PA, PB a nd PC for No-load auto-zeroing. It is suggested to forbid or to allow this function according to the user's concrete situation.

B Even if auto-zeroing function is in use, autotuning operation should be done again in the course of periodica 1 maintenance.

Explanation of Displaying Code:

6. System Normal Operation Code: ("W" is the present effective load)

I	Display C	ode		Indication		
	LO	No-load car	Outpu	it No-load signal	No-load: 00≤W≤Rated-load×P2%	
System	L1	Light-load car	Output Light-load		Light-load: No-load <₩≤Rated-load×P3	
displays 〖L*〗				signal	%	
	L2	Semi-load car	Output	Semi-load signal	Semi-load: Light-load <w≤rated-load×< td=""></w≤rated-load×<>	
					P4%	
	L3	Heavy-load car	Out	put Heavy-load	Heavy-load: Semi-load <w≤rated-load×< td=""></w≤rated-load×<>	
				signal	P5%

			special attention to polarity and distance.

How to do?

8, Brief Analysis of Other Conditions:

- (1)After installation of this weighing device, weighing signal changes in the course of operation? The elevator load output value is not held after elevator starts, adjust the relative items of the inverter and controller.
- 2)After long-term of operation, system no load zeroing point appears larger deviation? May be caused by the reason described in section 3. Chapter 3. Set system Autotuning mode to calibrate again
- (3)After the elevator weighing is changed from heavy load to light load, heavy load signal is still displayed? The movement of the moveable car platform is blocked, it is not reset after pressing. Solute the relevant mechanic problems.
- (4)System output signal doesn't change linearly along with the change of load? Check the structure of the moveable car platform, pay more attention that there should only be one pair of damping rubber or spring moving relatively to the moveable car platform.
- (5) During the system operation, analog output is abnormal or system resetting or speed-regulator cooperation is abnormal?
 - It may be caused by system power source series interference. Select another group of power to supply the system, or to provide an exterior power of AC/DC 24V/300mA to supply.

9. How to set an elevator with known "no-load \rightarrow rated load" compression deformation?

- For example: The max "no-load→rated load" compression deformation of this elevator is 5.8mm.
 - 1.Modify "PO=58" and save it. Refer to chapter 5:
 - 2.After system restarting, [LP] is displayed. Wait until [LL], [Lo] or [LH] is displayed;
 - 3.When the car is empty, adjust system installation position to make it display [Lo], fasten it;
- Operation 4.When [Lo] is displayed, press [π] and [θ] simultaneously, system begins to autotune no-load operation parameters;

5.After [PL] is display aglimer for 5 second, the whole process of autotuning is finished.

10. How to do Re-Autotune operation for system?

- Method 1: Simultaneously press [π] and [θ] on system control panel to power on. This moment, system aglimmer displays [PP] and [P-]. Keep 15 seconds, system will display [Pn]. On that occasion, all operation parameters reset to default settings.
- Method 2: Modifying parameter P0=0A or user specified operation code will reset system immediately to default status. But for users with specified code. The method is mentioned in Chapter 5.
- 11. How to modify output status of a system after autotuning is finished? Modify the corresponding controlling parameters of parameter P respectively. The method is mentioned in Section 6, Chapter 5.
- 12、 How to get the version code of the product? Press [θ] to supply power. System displaying [L1] [20] [..] [1.2] means that this product is of V1.2 relatively to USER' S GUIDE.
- 13, More on "P5, P6" multi-function terminals of EWD-H-XJ3:

Lower bit	Output status of terminal "P5~P6"		
setting of Parameter 〖P2〗	P5 "+"; P6 "-"		
X 0 X 1	Analog	0~10V 10~0V	For short distance connection, analog torque compensation speed regulation system is required.
X 2	Digital	0~10V	For user's selection of "ECW-AL1" remote transmitting
X 3)	0~10V	system, analog of $0{\sim}1000$ meters remote digitally transmitting

- 14. How to adopt 20% rated load for rated load autotune? Modify P0=04. After [Lo] positioning and no-load [PL] autotuning, in the period of system displaying [PH], load 20% of the rated load, press [θ], system displaying [L1] means the end of adjustment. This is an auxiliary method when 100% autotuning can be done.
- 15. The compression of car damping rubber exceeds the sensor inspection range? Before autotuning, be assure to select "PD" = "02/03" and save it. Then, readjusting the installing position of the sensor is OK (See parameter PD for more details).
- 16. On adopting operation of "load increasing, displacement aloofing" method? Before autotuning, be assure to select "PD" = "1*" and save it. Then, readjusting the installing position of the sensor is OK.

System Characteristics

17. Working principle of "EWD-H-XJ3" elevator weighing device

With the constantly development of elevator technology, the impact of elevator weighing device on elevator performance can not be neglected. The requirement of elevator for weighing devices with high accuracy, high reliability and multi-functions becomes extremely urgent. Presently, the progress of sensor technology and microcomputer is ceaseless. With the adoption of highly accurate Hall sensor, the change of displacement along with car platform load can be checked. Meanwhile, with the adoption of single chip microprocessor, scientific calculation can be done, making this device weigh the elevator car load effectively. With the cooperation of ECW—AL1 remote signal transferring device, analog or digital signal can be transferred far away, largely enlarging the user's application range and decreasing the additional cost in the course of use.

18、 Main property

Working in a contactless and inductive way. No mechanical movement. Solid-state relay outputs. Being directly installed in the original place of overloading switch. No necessity of changing the mechanism of elevator car.
 The whole system is designed in the waterproof structure with small overall size, easy installation and adjustment and simple structure.

(3) Wide induction range, high accuracy positioning, intelligent temperature compensation making the range of

Page16of20

operating temperature wider.

(4) The inner core consists of Hall sensor of high accuracy and single-chip microprocessor of high efficiency.

All parameters may be set on the field.

(5) Having the controllable function of "automatically return-to-zero at no load"

(6) Having the analog voltage output ports, greatly improving elevator performance in coordination with elevator speed regulator.

(7) Having the function of remote digital communication, fulfilling remote data transmitting together with "ECW-AL1".

(8) Adopting strong inductive magnet, improving the anti-interference capability of the system to the utmost.

(9) Each set has passed strictly aging treatment to assure reliable operation.

(0) The system is based mathematical equations and scientific calculation, correcting inspection error automatically.

(1) On-site adjustment is easy, either by autotuning or by manual displacement setting.

(12) The independent development of the programmable output signal control method can be used for all kinds of traction elevator with moveable car platform.

19、Technical specifications:

1.	Application	Being applicable to all moveable car platform elevators, with an auto inspectio		
		range of (2.00mm ≤car platform movement≤10.00mm); manual setting displacement rang		
		$2.5{\sim}9.9$ mm (relate to parameter PD)		
2.	Sensitivity	Elevator rated load/200 (With the ra	ted load of 1T, it is 5.0Kg)	
3.	System Error	≤1.5% (5~40°C)	In the whole temperature range $\leqslant 3.0\%$	
4.	Non-Linearity	≤1.0%		

5.	Output Mode:	Solid- state Relay	Programmable universal signal	 ①3/5 channel programmable output modes are: No load, light load, semi full load, heavy load, rated load, overload (customer may set the changing range freely). ②Each channel can be programmed as dynamic Close or Open contact. 	
				③Contact Capacity:DC/AC 32V/15mA。	
		Elevat	ator load changes from "no load" rated load", analog quantity: $0{\sim}10$ V linearly changin		
		Remote	e digital communication, with the cooperation of "ECW-AL1" to relies datum remote transfer.		
6.	Storage	e Temp. −25~75°C			
7.	7. Ambient −20~55°C				
	Temperat	ture:			
8.	Relative 20%~99%RH				
	Humidity:				
9.	Reaction Time ≤ 0.25 Second				
10.	Power Su	Supply: AC/DC 24(±10%)V/150mA			
11.	Installatio	stallation Place: Moveable car platform of elevator			
12.	Overall Size: $45 \times 45 \times 90$ mm ³				

●**: The intension exceeding the limit parameters listed above may result in the abnormality or permanent damage to the system.
Promise

(1)If this system appears any quality problem of product itself in 1 year after delivery, it will be replaced freely (damage of the product seal will not be dealt with) \circ

 $\ensuremath{(2)}\ensuremath{\mathsf{For}}$ any requirement of special functions, make it out by mail.

(3)Any system abnormality in adjustment or operation, please contact our company directly.
